### **INTRODUCTION & HYPOTHESIS**

- PFAS class of man-made chemicals with diverse range of properties and uses. Toxicity properties largely unknown.
- Pose significant hazard for >600 DOE/DOD facilities
- Approaches to assess *in vivo* toxicity are expensive
- Literature demonstrates certain toxicity endpoints may partially be understood and predicted computationally
- Urgent need to examine the role of computational approaches in aiding or replacing expensive in vivo experiments
- Can we generally predict PFAS toxicities & uncertainty on EPA list of >8,000
  PFAS
   PFAS
   Interview Management of Manage

#### PFAS: EMERGING CONTAMINANTS Per- and polyfluoroalkyl substances (PFAS)

#### Class of man-made chemicals of mounting national concern and government attention

4

#### **Sources and Uses**

- **Manufacturing** (uranium processing, metal plating, lubrication)
- Aqueous firefighting foams (AFFFs)
- Consumer/household
   products

Figure 1 from Sunderland et al. (2019) Journal of Exposure Science & Environmental Epidemiology 29(2). doi:10.1038/s41370-018-0094-1

### **PFAS: ENVIRONMENT & EXPOSURE**

#### **Chemical release into environment**

# 

#### Exposure

- Widespread
- Persistent in environment
- Above advisory levels (not enforced)
- Accumulates in blood, liver, and kidneys
   when exposed

Installations Conducting Assessments for PFAS Use or Potential Released

CONTRACTOR AND A CONTRACT OF A CONTRACT OF U.S. Department of Energy laboratory managed by UChicago Argonne, LLC

### TOXICITY

- Lifetime Health Advisory for two common PFAS (PFOS & PFOA) @ low concentration of PFOS and PFOA (70 parts per trillion)
- Understanding of PFAS toxicities lacking across >8,000 PFAS compounds
- Traditional in vivo experiments for toxicity expensive
- Complex due to the range of chemical/biological/cellular factors

Argonne National Laboratory is a U.S. Department of Energy laboratory managed by UChicago Argonne, LLC

### TOXICITY

#### Endpoint

- Median lethal dosages (LD<sub>50</sub>) dosage fatal to ½ population of animals
- Measured in substance amount taken orally (g or mol) per lab rat mass
- Units: <sup>mg</sup>/<sub>kg</sub> or -log(<sup>mol</sup>/<sub>kg</sub>)

Category	Toxicity	Dosage (mg/kg)
1	High	≤50
Ш	Moderate	50 to 500
Ш	Low	500 to 5,000
IV	Very low	>5,000

EPA toxicity classes

### **AI4PFAS WORKFLOW**

#### **Blueprint for exploration**

U.S. DEPARTMENT OF U.S. Department of Energy laboratory managed by UChicago Argonne, LLC.

### DATASETS

#### Aggregating toxicity data

- 13,329 organic compounds with oral rat LD<sub>50</sub> measurements
  - (combined EPA, NIH, NTP datasets) <u>LDToxDb</u>
  - 59 PFAS identified by structural (SMILES) match with EPA list
  - 518 (incl. 59 PFAS) selected by quantity of C-F bonds <u>LDToxDb-PFAS-like</u>

U.S. DEPARTMENT OF U.S. Department of Energy laboratory managed by UChicago Argonne, LLC.

Argonne 🛆 | 75

### **CHEMICAL FEATURIZATION**

#### **Calculating molecular descriptors and encodings**

- Molecular descriptors from Mordred package
- Fingerprint encodings (Extended-Connectivity Fingerprint)
- Graph structure representation (nodes=atoms, edges=bonds)

nAtoms	nAromRing	nDblBond
25	0	3
31	2	10
7	0	2

### **TARGETED LEARNING**

#### Targeted prediction with transfer learning workflow

Argonne National Laboratory is a U.S. Department of Energy laboratory managed by UChicago Argonne, LLC

Argonne 🛆 | 75

#### **TRANSFER LEARNING Results**

- Transfer-step adjustments • corresponding with level 1 were used
- No performance degradation
- Positive transfer established

Argonne National Laboratory is a
U.S. Department of Energy laboratory
U.S. Department of Energy laboratory
anaged by UChicago Argonne. LLC

## EXPLORING UNCERTAINTY

#### **Approaches**

- Deep ensemble
  - Multiple DL models trained and converge to different local minima
  - Distribution of predictions made by *N* ensemble models communicates uncertainty

#### Latent space

- Dimensional analysis of cross-section of the model's prediction
- UMAP used on representation layer. *Distance(prediction, training set)* used as correlative metric

Lakshminarayanan et al. Simple and Scalable Predictive Uncertainty Estimation Using Deep Ensembles. *Proceedings of the 31st International Conference on Neural Information Processing Systems* (2017)

Janet et al. A quantitative uncertainty metric controls error in neural network-driven chemical discovery. Chemical Science (2019) 16
Argonne 
75

### **UNCERTAINTY ANALYSIS**

#### **Uncertainty derived on Transfer-DNN-Mordred predictions**

### **UNCERTAINTY ANALYSIS**

#### **Deep ensemble and pitfalls**

- Successfully characterization of local uncertainty
- ~58% of uncertainty metrics correspond with prediction error
- Overconfident learning
- Application challenges

W.S. DEPARTMENT OF U.S. Department of Energy laboratory managed by UChicago Argonne, LLC.

#### SELECTION: TO PREDICT OR NOT TO PREDICT? Converting uncertainties into automated decisions

Paradigm which allows the model to respond "I can't answer", when the confidence is low

$$(f,g)(x) = \left\{ egin{array}{cc} f(x), & if \ g(x) \ \geq \ au \ Don't \ know, & Otherwise \end{array} 
ight.$$

• Employed within input space of limited understanding

Geifman et al. *SelectiveNet: A Deep Neural Network with an Integrated Reject Option.* International Conference on Machine Learning (2019)

W.S. DEPARTMENT OF U.S. Department of Energy laboratory managed by UChicago Argonne, LLC.

### **SELECTIVE NET: TRAINING**

$$\mathcal{L}_{(f,g)} = r(f,g \mid S_k) + \lambda \max(0, (c - \phi(g \mid S_k)))^2$$

### **Selective risk**

Penalty term for over-abstention

- Abstention comes with no risk
- Prediction carries risk

- But may come with penalty
- Comes with no abstention penalty

U.S. DEPARTMENT OF U.S. Department of Energy laboratory managed by UChicago Argonne, LLC.
